4-FACE STATION

HW AND SW FOR 4-FACE FUEL INSPECTION

The 4-FACE station is a rack with all necessary hardware and software to perform a 4-FACE fuel inspection. The rack contains control units for the cameras and lights, a computer for video recording, storage and replay, a quad unit, monitor and video encoder.

APPLICATIONS

- Mandatory rack to perform a 4-FACE fuel inspection, containing:
- - CCU400 Camera and Light Control Unit for the 4 cameras and 4 lights on the camera frame
- - Video processing box
- - 4-FACE Inspection Station computer with all features described under "Benefits"

BENEFITS

- The 4-FACE Inspection Station is a high-performing rack--mounted PC with pre-installed and preconfigured software
- Fuel assembly name has to be inserted before recording - gives a well-organized file directory
- Date and time automatically inserted in the recorded images
- Text, logos, date and time, as well as pan&tilt values can be added to the video window
- Images can be inverted when using cameras that feature a mirror
- Adjustable speed at playing the recorded files, e.g. slow motion
- Image measuring can done
