News & information from Ahlberg Cameras – December 2024

NEW PRODUCT!

INTRODUCING THE ALL NEW AHL-LIGHT 50

Robust and radiation-tolerant LED light both above and below surface

The **AHL-LIGHT 50** is a high-performance, radiation-tolerant industrial LED light, engineered for nuclear environments. With unique capability of operating in both air and water, AHL-LIGHT 50 is multiplying its work applications in irradiated areas. It features a luminous flux of 55,000 lumens at 3000K or 58,000 lumens at 5000K.

Minimal maintenance is ensured by using LED technology with over 50,000 operational hours.

A state-of-the-art LED light with low maintenance costs, long lifetime and 24/7 illumination in high radiation areas.

Explore and learn more of the benefits of AHL-LIGHT 50 [here!](#)

EXPANDING IN SIZE AND SQUARE METERS

Our new premises is designed to house the nuclear technology of tomorrow

Ahlberg Cameras new premises is set to be finished in late 2025 and will be fully adapted to our extensive requirements in order to have a flexible and optimized production flow. This allows us to scale up our production rate to meet the demand. Several larger customized systems will be able to be manufactured and tested in parallel in production, which will shorten the lead time for customers. Also the development department will get larger areas to be able to do system tests and carry out tests that have not been able to be carried out in-house before. This will also shorten the time for developing new exciting products and system solutions.

Rapid growth and need for larger spaces

Johan Bäckström, CEO at Ahlberg Cameras, talks about the company's growth and their need for more modern and adapted premises which support this development:

– We have grown rapidly in recent years thanks to winning several large projects in video surveillance and fuel inspection systems. We are currently cramped in our existing building and look forward to entering the adapted premises where we will have a good and creative environment in which we can operate and grow. It is important for us to be able to attract personnel with a good working environment in a building that have a low environmental footprint. Accordingly, it was a requirement that the building be environmentally certified according to Sweden Green Building Council Miljöbyggnad Silver.

HAPPY HOLIDAYS ARE HERE AGAIN.

Wishing all our clients the best of times!

Looking forward into the coming year and giving thanks for the year passed.

At Ahlberg Cameras we're have our eyes set on an exciting 2025 with our brand new premises set to be ready and the launch and development of new cameras.
