MANIPULATOR CRANE CAMERA SYSTEM

The Manipulator Crane Camera System is an important tool for increasing fuel handling safety in a PWR. The system follows the movements of the manipulator crane during fuel handling. The system gives an immediate verification of the manipulator crane gripper operations and positioning.

APPLICATIONS

- Follows the movements of the manipulator crane during fuel handling
- Gives an immediate verification of the manipulator crane gripper operations and positions

SPECIFICATIONS

BENEFITS

- Important tool for increasing fuel handling safety
- Reduces fuel handling time consumption
- Immediate verification of fuel handling operations
- High quality color images for digital video recording
- Cost-effective solution
